Product Spotlight

UNI-LANCE Exothermic Cutting Adaptor Kit

has everything you need to convert your acetylene torch to a portable versatile exothermic cutting tool.

Exothermic cutting is a chemical reaction (oxidation) that occurs when steel is heated to its kindling temperature and is injected with pure oxygen under pressure. The resulting reaction reaches temperatures of 7,500°F (4,149°C). Exothermic cutting is extremely efficient for rapidly cutting ferrous and non-ferrous materials.

Applications:

- Cutting Liners from ball mills
- Demolition work and cutting scrap
- Gouging hard surfaces
- Cutting thick pieces of steel/iron
- Removing frozen pins from hydraulic cylinders
- Removing bucket teeth from dozer blades and dragline buckets
- Railroad track maintenance
- Cut reinforced rod
- Highway maintenance and cutting guard rails

Tips from the Weld Lab...The UNI-LANCE Kit is fast and easy

Watch it in action

[KGS Demolition Attachment Services](#)

Dry firing hammers can result in chisel set pins getting flared out and stuck. We recently added a [Hardface Technologies by Postle Industries, Inc.](#) UNI-LANCE adaptor kit to our torch in order to blow relief through the stuck set pins to remove them safely without damaging the hammer in the process.
